

Plant Growth-Promoting Microbes

Greenhouse Application

-  Enhance soil and plant health
-  100% organic, non-toxic, chemical and pathogen free
-  All-natural, bio-safe microbes
-  Improves soil health

Greenhouse Plant Health

Apply our plant growth-promoting microbes to your greenhouse plants to boost nutrient uptake, increase crop yield, and restore soil health.

Add life to your soil

Humalite

Our sustainable humalite products improve soil health, create stronger plants, and increase yields.

Humalite is a highly concentrated source of humic acid found only in Alberta, Canada. Humalite contains a unique profile of functional carbon groups, unmatched by other source materials. The unique properties of humalite in a durable fertilizer-compatible granule is partially solubilized for rapid release and availability in any soil type.

Humalite

- Improves soil structure and moisture retention
- Provides functional carbon
- Improves nutrient efficiency in your soil
- Is natural and organic
- Helps harness micro nutrients in your soil

Plant Growth-Promoting Microbes

Rhodopseudomonas palustris

Enhances soil bio-activity and nitrogen fixation

Bacillus lichiniformis

Enhances soil bio-activity and provides plant growth hormones

Nitrosomonas europaea

Converts ammonia to nitrate and solubilizes phosphates

Nitrobacter winogradskyi

Converts nitrite to nitrate and solubilizes phosphates

Bacillus subtilis

Solubilizes phosphates and siderophore production

Microbes + Humalite

Combine both products for best results

Both are 100% organic

Promotes a balanced pH level in your soil

Adds carbon to enhance growth and metabolism in soil microorganisms

Improves root development

Increases yield boost and plant health

Enables plants to repel insects and disease
